Metadata Service

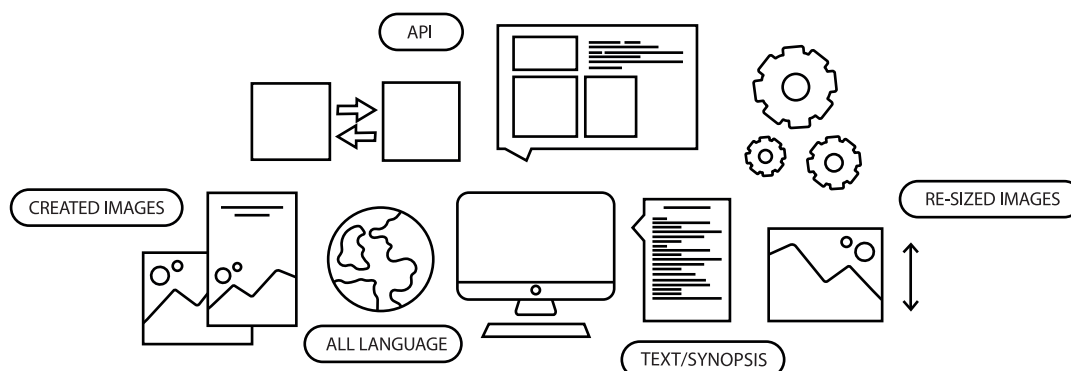

Metadata Service

STOCKHOLM STREAM

The metadata team of StockholmStream have a long history enriching metadata for the VOD providers. Our metadata service for VOD support any metadata and in any language. "Every play count", that is why we always make sure the content have the correct information, that the images are of great quality and so the viewing experience is the best possible.

Our metadata operators have years of experience and provides metadata daily on various technology platforms from different distributors and studios.

Automated delivery of metadata

The metadata that we provide can be fetched from our system using an API, or delivered according to the specification of your system. We are flexible and customize the data according to your requests.

Data source

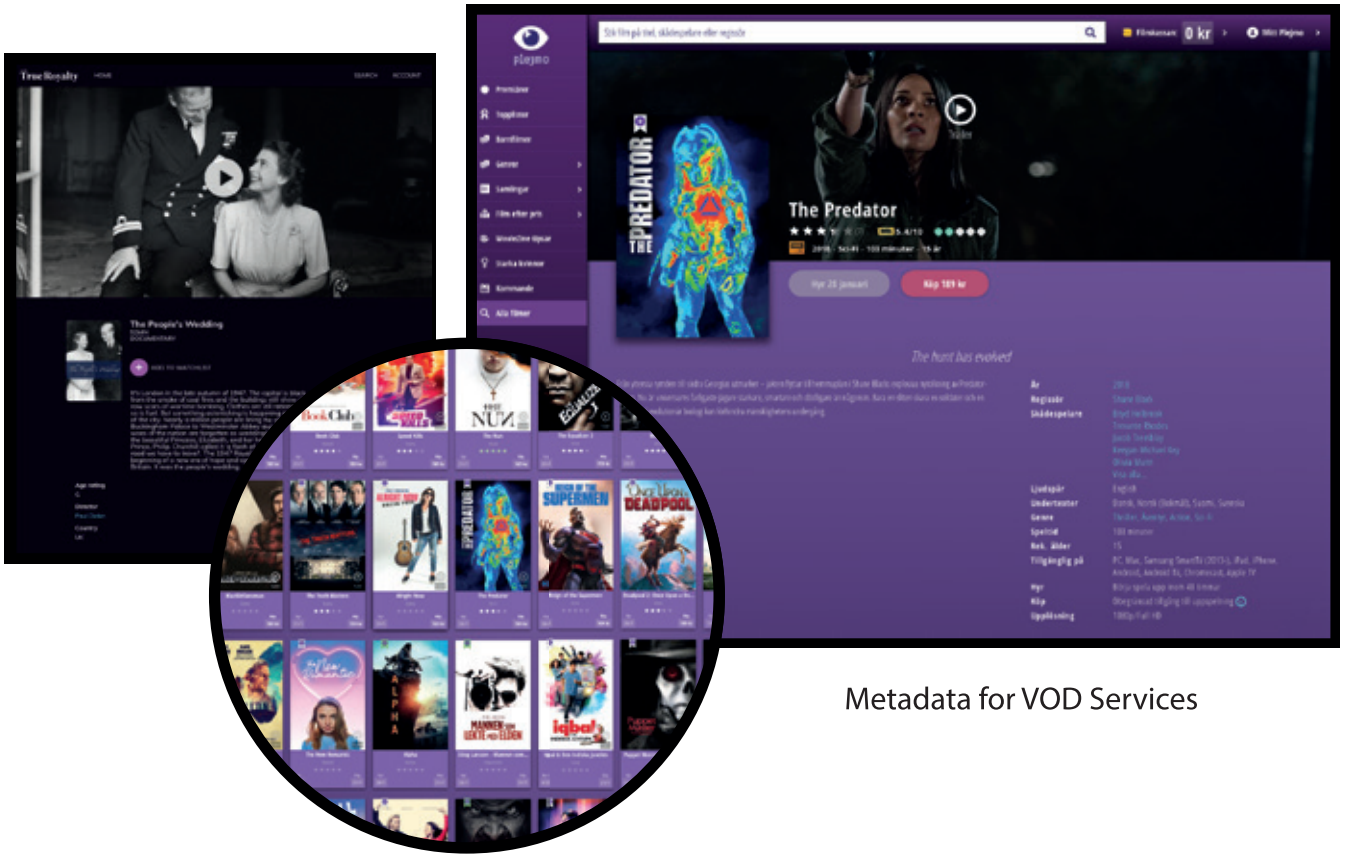

Depending of the type of material to be processed, the source of metadata can be fetched from our database library, contentowners recommended systems, or created and enrich by the metadata team.

Metadata for VOD Services

Automated delivery of metadata

A person is working at a desk. In the foreground, a hand is writing on a notebook with a pencil. The notebook has some diagrams and text on it. In the background, a laptop is open, and a tablet is propped up, displaying a website. The scene is dimly lit, with a blueish tint. A black banner with white text is overlaid on the image.
